AI AGENT GOVERNANCE

5 Signs Your AI Agents Aren't Audit-Ready

The compliance gaps most teams don't see until an auditor asks.

AI Identity

SIGN #1

Your agents share API keys

If multiple agents use the same credentials, you can't attribute actions to a specific agent.

> *An auditor asks: "Which agent accessed patient records at 2:47 PM?"*
>
> *Your answer: "We don't know. They all use the same key."*

THE FIX

Per-agent identity with scoped permissions. Every agent gets its own credentials.

AI **AI Identity**

SIGN #2

Your audit logs are in application code

Console.log and application-level logging can be modified, deleted, or silently fail.

> *That's not an audit trail.*
> *That's a hope trail.*

Regulators require tamper-evident records that can be independently verified.

THE FIX

Cryptographically chained audit logs (HMAC-SHA256) that prove no entries were altered or deleted.

2 / 5

SIGN #3

You can't replay what an agent did

When something goes wrong, can you step through the exact sequence of an agent's decisions?

> *Or do you spend hours piecing together scattered logs across 4 different systems?*

THE FIX

Forensic replay. Step through any agent session with full chain-of-thought capture.

AI Identity

SIGN #4

Your agents fail open

What happens when your governance layer goes down?

> *If agents keep running unmonitored, that's like removing the security cameras and hoping nothing happens.*

THE FIX

Fail-closed enforcement. Requests denied on timeout, error, or ambiguity. No silent bypasses.

AI Identity

SIGN #5

No human-in-the-loop for high-risk actions

AI agents making financial transactions. Accessing medical records. Modifying production systems.

> *No approval gate means you're one hallucination away from a compliance incident.*

THE FIX

Configurable approval gates enforced at the gateway level — not optional middleware agents can skip.

AI Identity

5 / 5

How did you score?

0 — 1	You're ahead of most teams. Fine-tune your governance.
2 — 3	Gaps exist. Address them before your next audit cycle.
4 — 5	Your agents are operating without a safety net. Fix this now.

AI Identity

Governance infrastructure for AI agents

- ✓ Per-agent identity with scoped permissions
- ✓ Tamper-proof audit trails
- ✓ Deny-by-default policy enforcement
- ✓ Deploy in 15 minutes
